Education

UNIVERSIDAD AUTÓNOMA DE NUEVO LEÓN   Monterrey, MX
Bachelor in IT.   2020

Experience

LUXOFT   Remote
Frontend Developer   September 2022 - Present

Support and development of new templates/pages of the marketing website for a Fintech company that helps users save money for healthcare expenses.
Worked on a NextJS project with a mix of static and dynamic pages developing responsive, SEO friendly, reusable and good performing components and pages using React and a *CSS-in-JS* library (SASS). The content of the website is fetched from the CMS during the build time and then distributed to the different pages/templates of the project.

Highlights:
- Worked on the redesign and enhanced the performance of one of the most visited pages of the website making it 2 times faster.
- Worked on the redesign of the most visited landing pages of the website creating a more engaging, responsive, and accessible experience for the user.
- Implemented the new Contentful's feature "Live Preview" on the project so that stakeholders could have a preview of how new pages will exactly look before launching to production, therefore reducing 10% the introduction of bugs to the production environment.
- Created modular and reusable content types in the CMS reducing the friction between the content and development teams when creating new pages.
- Created the first tests of the project with Jest avoiding introducing bugs on new feature releases.
- Introduced typescript in the project to reduce the risk of errors on the website.
- Ran and interpreted Lighthouse reports to find opportunities to increase SEO and performance scores.

Stack:
- Javascript
- Typescript
- Node JS
- React
- NextJS
- Netlify
- Contentful
- Styled components
- Jira

ENROUTE SYSTEMS   Remote
Full Stack Developer   January 2021 - September 2022

Support and development of new pages and templates for a marketing website of a Cloud-based communication services company.
Worked on a Gatsby JS project developing and fixing serverless functions, and responsive, good performing and customizable components using React and SASS. This website was developed using SSG (Static Site Generation) resulting in fast loading pages. All the pages/templates retrieve the content (images, text, SEO data) from the CMS using Graphql queries.

Highlights:
- Performed the redesign of customer story pages creating dynamic and fully customizable components that could be added and edited from the CMS (Content Stack).
- Built an internal chatbot that helps employees send and receive virtual tokens through Slack, updating the amount

of tokens on a PostgreSQL database.

Stack:
- Node JS
- Netlify
- React
- Gatsby JS
- Graphql
- Algolia
- SASS
- PostgreSQL

FINANCIERA CUALLIX   Remote
Full Stack Developer Intern   August 2019 - November 2019
Gave support to the database and the web application of a finance company that helps employees manage the data of the clients.
Gave support to an internal web application built with .NET C# used to manage data of the clients by fixing bugs and adding new features client and server side.. Created and implemented stored procedures on a SQL Server database.

Highlights:
- Quickly learned Javascript and jQuery from scratch and successfully adapted to the project.

Stack:
- ASP.NET
- C#
- SQL Server
- jQuery
- Javascript
